

Smart FEG

**More than
Motion.**

Yesterday. Today. Tomorrow.

Our **proven unit for disentangling springs (FEG)** has now received an upgrade: The **Smart FEG** now comes with an integrated compact control system that, just like our drum conveyor, can access all functions and settings via an intuitive menu on the integrated touchpad. Optionally, ring sensors for detecting the filling levels of the tubes can be managed straight from the small control system.

Facts

- › Untangling and feeding of coil springs
- › Simple operation via compact control system
- › Lowers your assembly costs
- › Straight tube outlets for improved integration (requires less tubing when the blow feed end position is above the Smart FEG)
- › Variable swirl, pause and blow back times (100 – 10,000 ms)
- › Manual or automatic operation

Benefits

- › Compact design
- › Intuitive user interface
- › Simple operation via small control unit
- › Reduces your operation costs
